Wild, wooden and wonderful puzzles from Imagiplay

Think you've got to buy a plastic puzzle to get vibrant colors and eye-popping designs? You may want to consider Imagiplay.

Their stunning collection of 3D puzzles attract kids like ice cream on a hot summer day. I was sent the [Elephant Family](#) and the [Cat Family](#) to test. My little girl loved them. We've worked the puzzles together in the evening and it's amazing to see her grasping the concept of pieces fitting together to form a whole.

With supervision, a 2-year-old can handle these toys, but older kids will be able to appreciate them solo. There's a puzzle to match just about every interest: sea life puzzles, dinosaurs, and many more. In addition to being attractive and entertaining, parents will feel good knowing these puzzles are made from environmentally-friendly rubberwood.

Small puzzles sell for about \$13, there are lots of other options and toys on the [Imagiplay site](#). [Blocks and 3D Puzzles.com](#) has the best selection of puzzles and [eBakers](#) is also well stocked.
